

## UNIVERSAL UNI-/BIPOLAR SIGNAL TRANSMITTER

- Measures and outputs uni-/bipolar voltage and current signals
- Works with both passive and active inputs and outputs
- Uses the 4501 display for programming and process monitoring
- Fast < 20 ms response time and excellent < 0.05% accuracy
- Universally powered by 21.6...253 VAC / 19.2...300 VDC

### Applications:

- Fast < 20 ms response time for measuring signals produced by torque, position, current & acceleration sensors.
- User configurable bipolar or unipolar I/O means the 4104 is suitable for nearly any voltage or current conversion.
- The excitation source enables measurement of two or three wire transmitters.
- The active or passive I/O makes the 4104 perfect for power matching current loops.
- Converts narrow bipolar inputs to wide bipolar or unipolar outputs, e.g.,  $\pm 1$  volt input =  $\pm 10$  volt or 4-20 mA output.
- Selectable direct or inverse I/O makes the 4104 suitable for proportional control applications.
- The "V-curve" function outputs 100% - 0 - 100% when a 0 - 100% input signal is present.

### Technical characteristics:

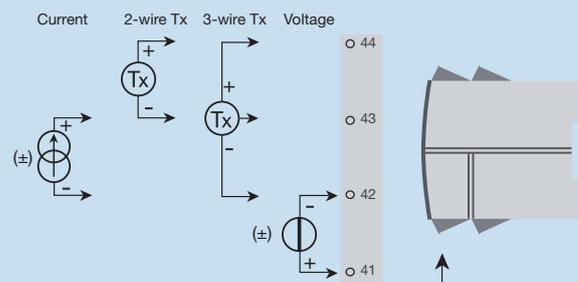

- The latest analogue and digital techniques are used to obtain maximum accuracy and immunity to interference.
- The current output can drive up to 800 Ohms, with an adjustable response time of 0.0...60.0 seconds.
- Exceptional mA output load stability of < 0.001% of span/100 Ohm.
- Meets the NAMUR NE21 standard, ensuring high accuracy in harsh EMC environments.
- Meets the NAMUR NE43 standard, allowing the control system to easily detect a sensor error.
- Each unit is tested to a high 2.3 kVAC, 3-port galvanic isolation level.
- Excellent signal to noise ratio of > 60 dB.

### Mounting / installation / programming:

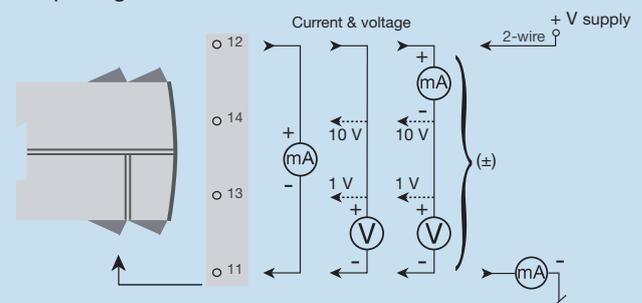

- Very low power consumption means units can be mounted side by side without an air gap - even at 60°C ambient temperature.
- Approved for marine applications.
- Programming, monitoring, and 2-point process calibration is accomplished with the 4501 detachable display.
- All programming can be password protected.

## PR 4501 Display / programming front

### Mounting / installation

- 4501 is a detachable display that can be mounted on the 4104 front for programming and signal monitoring.

### Application

- Communications interface for modification of operational parameters in 4104.
- When mounted in the process, the display shows process values and device status.

### Technical characteristics

- LCD display with 4 lines:  
 Line 1 (H=5.57 mm) shows the scaled process value - OK or error.  
 Line 2 (H=3.33 mm) shows the selected engineering unit.  
 Line 3 (H=3.33 mm) shows analogue output or TAG no.  
 Line 4 shows status for communication and signal trending.
- Programming access can be blocked by assigning a password. 4501 can be moved from one device to another. The configuration of the first transmitter can be saved and downloaded to subsequent transmitters.
