

# UNIVERSAL TRIP AMPLIFIER

- Input for RTD, TC, Ohm, potentiometer, mA and V
- 2 adjustable alarm limits
- Mounting on DIN rail or wall
- 2 relay outputs
- Universal AC or DC supply

## Advanced features:

- Programmable via detachable display front (4501), process calibration, relay simulation, password protection, error diagnostics and selection of help text in several languages.

## Application:

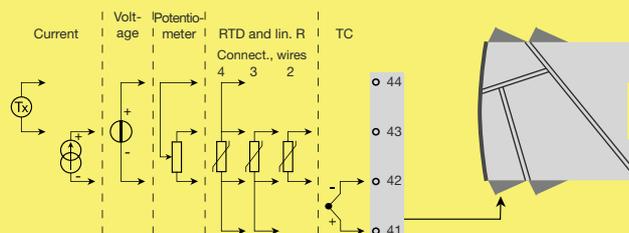

- Process control with 2 pairs of potential-free relay contacts which can be configured to suit any application.
- Trip amplifier with window function defined by a high and a low setpoint. The relay changes state outside the window.
- Sophisticated sensor error surveillance, where one relay holds the state immediately prior to the sensor error, thus allowing the process to continue. The other relay can be set for sensor error alarm so that the defect sensor can be replaced immediately.

## Technical characteristics:

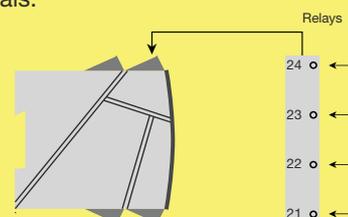

- When 4131 is used with the 4501 display / programming front, all operational parameters can be modified to suit any application. As the 4131 is designed with electronic hardware switches, it is not necessary to open the module for setting of DIP switches.
- A green front LED indicates normal operation and malfunction. A yellow LED is ON for each active output relay.
- Continuous check of vital stored data for safety reasons.
- 3-port 2.3 kVAC galvanic isolation.

**Order codes:**

**4131 = Universal trip amplifier**

**4501 = Display / programming front**

**PR 4501 Display / programming front**

**Application:**

- Communications interface for modification of operational parameters in 4131.
- Can be moved from one 4131 module to another and download the configuration of the first transmitter to subsequent transmitters.
- Fixed display for visualisation of process data and status.

**Technical characteristics:**

- LCD display with 4 lines; Line 1

(H=5.57 mm) shows input signal, line 2 (H=3.33 mm) shows units, line 3 (H=3.33 mm) shows TAG no. and line 4 shows communication and relay status.

- Programming access can be blocked by assigning a password. The password is saved in the transmitter in order to ensure a high degree of protection against unauthorised modifications to the configuration.

**Mounting / installation:**

- Click 4501 onto the front of 4131.
