BALL-IN-CUP MOUNTS
PLATFORM MOUNTS

LOAD BUTTONS

- Stainless Steel Construction
- Eliminates Extraneous Forces

ROD END BEARINGS

- Durable Construction
- Ensures axial application of tensile force

BALL-IN-CUP MOUNT

- Rugged Construction
- Self Aligning to reduce Side Loads
- Flexible/Simple adaptor for Hopper Weighing Applications

PLATFORM MOUNT

- Stainless Steel Construction
- Self-Aligning for uneven floor mounting
- Easy installation within platform assembly
- Low Profile, maintaining low platform height

LOAD BUTTONS & ROD END BEARINGS

Our range of Load Buttons and Rod End Bearings are suitable for use with the DSCK, DSCC, DBCR, DBB, DBBSM, OSB & OBBS series of Load Cells. They are designed to align forces through the principle axis of the load cell thus reducing the effects of extraneous forces, hence offering improved performance from the cell. Load buttons are used where compressive forces are applied, while rod end bearings are used in the case of tensile force being applied.

BALL-IN-CUP MOUNT

The Ball-In-Cup mount is a useful addition to the OBBS series Load Cell. It provides a flexible joint to permit limited movement of a silo or hopper due to external factors, such as temperature variations causing thermal expansion. The arrangement is very straightforward to install, thus offering a cost effective solution, minimising commissioning down-time.

PLATFORM MOUNT

The Platform Mount has been specifically designed, for use with the OSB series Load Cell, in platforms, where a number of Load Cells are used together. The stainless steel construction with the inert neoprene rubber foot makes the assembly impervious to most industrial chemicals and ideal for harsh environments. They are supplied fitted to the required load cell direct from the factory.
