Customer Reference/Order Number:

Number of Loggers:

Scaling Information

What will the sensor record:
Sensor range:
What units to be display in:
Sensor output:

Supporting Information

Connected sensor:
Link to datasheet:
Additional Notes:

Custom Scaling

Tinytag Instrumentation data loggers can be factory configured to user specifications to show readings appropriate for the sensor they are connected to. To confirm that a logger can be configured to work with a specific sensor, we need certain information about the sensor and ask you to supply the relevant data sheet under Support Information.

Please complete this form to submit a specification for evaluation.

Sensor Type

What does the sensor actually record? e.g. pressure, flow rate, rainfall etc.

Sensor Range

What is the range of the sensor? e.g. 0 to 10bar, 10 litres per pulse etc.

Units

What units should data be displayed in? e.g. mBar, l/s etc.

Sensor Output

What is the output from the sensor? e.g 0 to 10V, 4 to 20mA, a pulsed output etc.
