MultiCon

Controllers, data recorders, HMI

The MultiCon line includes advanced controllers and data recorders with great potential closed in small casings. MultiCon has been specifically designed for advanced applications in industrial automatic control engineering. It does not mean, however, that the device cannot be applied in smaller systems. MultiCon can be equipped with three isolated RS-485 interfaces which make it a perfect solution for distributed systems to work as CPU. Thanks to Ethernet interface the device can be monitored via the Internet. A wide range of input and output modules allows to customize CMC precisely as the customer requires it. Thanks to a colour touchscreen working with the user interface becomes a pleasure, while MultiCon operation playing the role of HMI is intuitive and comfortable. Our devices are LINUX-based products to ensure stable operation.

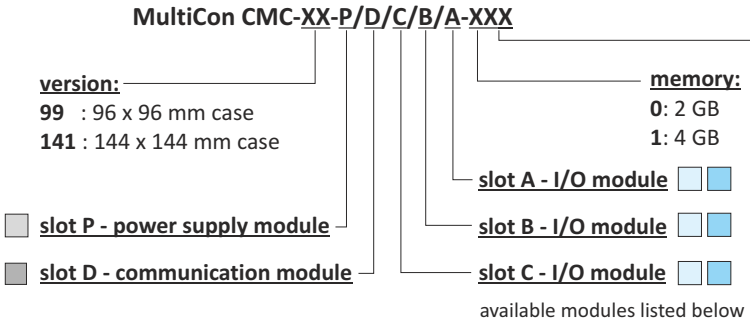
The biggest advantage of all devices from the MultiCon line is a big number of built-in inputs / outputs accessible in one compact device. The most developed version **CMC-99** has up to 48 measurement or digital inputs and 60 virtual channels whereas **CMC-141** has 50% more inputs / outputs and virtual channels.
Thanks to a well-thought-out module design you can choose among a wide range of modules and connect them to slots in the way you wish but you do not have to use all slots. You can also decide on your own how to use virtual channels, if they are going to be used for direct measurement readings, mathematical functions, timers, profile creation, set points or virtual objects.
What if one day you want to change your configuration, add new modules or change their slots? That's not a problem! All you have to do is to send your device to an authorized distributor who will perform the changes you require.

TECHNICAL DATA

	CMC-99	CMC-141
Power supply/consumption	19-50V DC, 16-35V AC or 85-260V AC/DC, typ. 15 VA, max. 20 VA	19-50V DC, 16-35V AC or 85-260V AC/DC, typ. 25 VA, max. 35 VA
Display	3.5” graphic TFT, 16-bit colour, 320 x 240 pxs, touchscreen navigation	5.7” graphic TFT, 16-bit colour, 320 x 240 pxs, touchscreen navigation
Measurement inputs	• up to 12 universal, isolated or unisolated: 0/4 ÷ 20 mA; 0/1 ÷ 5V, 0/2 ÷ 10V, 0 ÷ 30V; thermocouples: J, K, S, T, N, R, B, E (PN-EN), L (GOST); -10 ÷ 25 mV, -10 ÷ 100 mV, 0 ÷ 600 mV; RTD (2/3/4 wire): Pt100, Pt500, Pt1000 (PN-EN), Pt'50, Pt'100, Pt'500 (GOST), Ni100, Ni500, Ni1000 (PN-EN), Cu50, Cu100 (PN-83M-53852), Cu'50, Cu'100 (PN-83M-53852); resistance 0 ÷ 300 Ω, resistance 0 ÷ 3 kΩ • up to 48 analogue: 0/4 ÷ 20 mA, 0/1 ÷ 5V, 0/2 ÷ 10V • up to 24 thermocouples: J, K, S, T, N, R, B, E (PN-EN); L (GOST); ± 25 mV, ± 100 mV, -10 ÷ 25 mV, -10 ÷ 100 mV • up to 12 RTD: Pt100, Pt500, Pt1000 (PN-EN); Pt'50, Pt'100, Pt'500 (GOST); Ni100, Ni500, Ni1000 (PN-EN); Cu50, Cu100 (PN-83M-53852); Cu'50, Cu'100 (PN-83M-53852); 0 ÷ 300 Ω, 0 ÷ 3 kΩ • up to 24 NTC: 0 ÷ 110 kΩ • up to 12 counters: max. freq. 5 kHz • up to 12 digital flowmeter / ratemeter: max. freq. 50 kHz • up to 12 analogue flowmeter: 0/4 ÷ 20 mA • mixed inputs: analogue-NTC temperature or analogue-digital: up to 12 x 0 ÷ 20 mA, 4 ÷ 20 mA and up to 12 x 0 ÷ 5V, 1 ÷ 5V, 0 ÷ 10V, 2 ÷ 10V and up to 24 x NTC or digital	• up to 18 universal, isolated or unisolated: 0/4 ÷ 20 mA; 0/1 ÷ 5V, 0/2 ÷ 10V, 0 ÷ 30V; thermocouples: J, K, S, T, N, R, B, E (PN-EN), L (GOST); -10 ÷ 25 mV, -10 ÷ 100 mV, 0 ÷ 600 mV; RTD (2/3/4 wire): Pt100, Pt500, Pt1000 (PN-EN), Pt'50, Pt'100, Pt'500 (GOST), Ni100, Ni500, Ni1000 (PN-EN), Cu50, Cu100 (PN-83M-53852), Cu'50, Cu'100 (PN-83M-53852); resistance 0 ÷ 300 Ω, resistance 0 ÷ 3 kΩ • up to 72 analogue: 0/4 ÷ 20 mA, 0/1 ÷ 5V, 0/2 ÷ 10V • up to 36 thermocouples: J, K, S, T, N, R, B, E (PN-EN); L (GOST); ± 25 mV, ± 100 mV, -10 ÷ 25 mV, -10 ÷ 100 mV • up to 18 RTD: Pt100, Pt500, Pt1000 (PN-EN); Pt'50, Pt'100, Pt'500 (GOST); Ni100, Ni500, Ni1000 (PN-EN); Cu50, Cu100 (PN-83M-53852); Cu'50, Cu'100 (PN-83M-53852); 0 ÷ 300 Ω, 0 ÷ 3 kΩ • up to 24 NTC: 0 ÷ 110 kΩ • up to 12 counters: max. freq. 5 kHz • up to 12 digital flowmeter / ratemeter: max. freq. 50 kHz • up to 18 analogue flowmeter: 0/4 ÷ 20 mA • mixed inputs: analogue-NTC temperature or analogue-digital: up to 24 x 0 ÷ 20 mA, 4 ÷ 20 mA and up to 24 x 0 ÷ 5V, 1 ÷ 5V, 0 ÷ 10V, 2 ÷ 10V and up to 24 x NTC or digital
Digital inputs	• up to 49 *	• up to 73 *
Outputs	• up to 8 analogue 4 ÷ 20 mA, passive, isolated, resolution 12 bit • up to 16 SPST relay 1A/250V • up to 4 SPDT relay 5A/250V • up to 48 SSR	• up to 24 analogue 4 ÷ 20 mA, passive, isolated, resolution 12 bit • up to 36 SPST relay 1A/250V • up to 18 SPDT relay 5A/250V • up to 72 SSR
Sensor supply output	• 1 x 24V DC ±5%, 200 mA max.	• 1 x 24V DC ±5%, 200 mA max.
Communication interface	**Basic version**: RS-485, 1 x USB Host, **ETU**: 1 or 2 x USB Host, 1 x Ethernet **ACM**: 2 x RS-485, 1 x RS-485/232, 1 or 2 x USB Host, 1 x Ethernet	**Basic version**: RS-485, 1 x USB Host, **ETU**: 1 or 2 x USB Host, 1 x Ethernet **ACM**: 2 x RS-485, 1 x RS-485/232, 1 or 2 x USB Host, 1 x Ethernet
Protocols	Modbus RTU Master/Slave, Modbus TCP Server, HTTP, Web Server, NTP	Modbus RTU Master/Slave, Modbus TCP Server, HTTP, Web Server, NTP
IP rate protection	IP 65 (device front side), options: IP 65 version including gasket for panel cut-out sealing or IP 54 transparent door with key; IP 40 (front USB version)	IP 65 (device front side), optional IP 65 version including gasket for panel cut-out sealing or IP 54 transparent door with key; IP 40 (front USB version)
Operating temp. **Storage temp.**	0°C ÷ +50°C (optional -20°C ÷ +50°C) -10°C ÷ +70°C (optional -20°C ÷ +70°C)	0°C ÷ +50°C (optional -20°C ÷ +50°C) -10°C ÷ +70°C (optional -20°C ÷ +70°C)
Data memory **Data recording speed**	internal 2 GB (option 4 GB) from 0.1 s to 24 h with resolution 0.1 s	internal 2 GB (option 4 GB) from 0.1 s to 24 h with resolution 0.1 s
Dimensions	case (WxHxD): 96 x 96 x 100 mm; panel cut-out: 90.5 x 90.5 mm	case (WxHxD): 144 x 144 x 100 mm; panel cut-out: 137 x 137 mm

** one digital input is available in standard, integrated on PS32 or PS42 power supply.*

MultiCon



options:
01: no options
0C: PCB conformal coating
11: IP 65 gasket
1C: IP 65 gasket + PCB conformal coating
81: operating temp. -20°C ÷ +50°C + PCB conformal coating
B1: front USB Host (IP 40)
BC: front USB Host (IP 40) + PCB conformal coating
P1: IP 65 gasket + operating temp. -20°C ÷ +50°C + PCB conformal coating
K1: front USB Host (IP 40) + operating temp. -20°C ÷ +50°C + PCB conformal coating

Optional: **LKS-99/141** Data logging licence key
ENS-99/141 „E-mail notifications" licence key

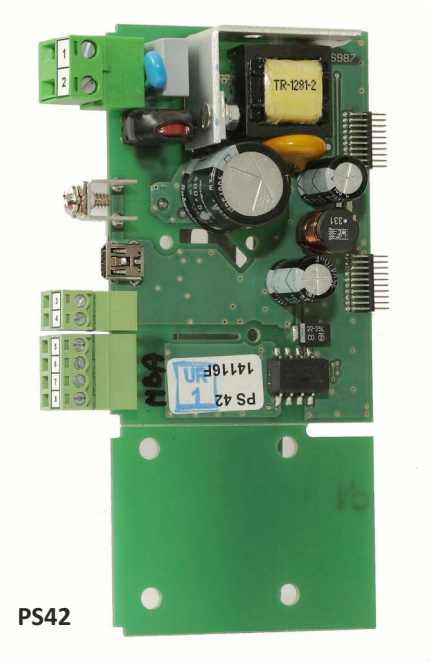
* The installation of the R81 module in slot B only in the case where in the slot C another relay module (R81 or R45) was installed.

MultiCon

Power supply modules



PS42

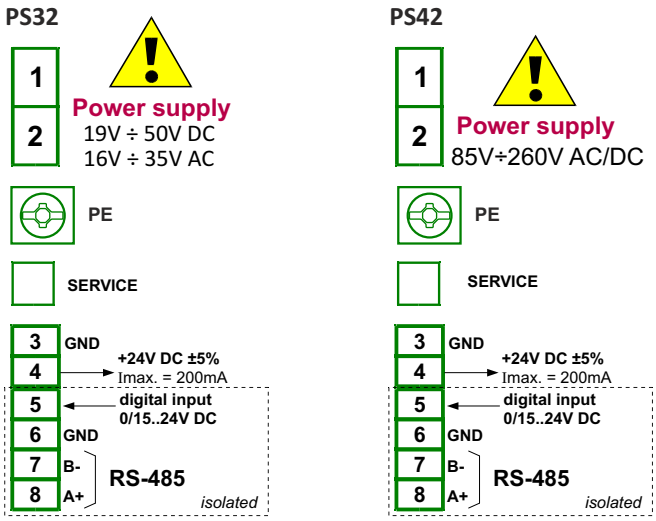
- **PS32**: 19V ÷ 50V DC; 16V ÷ 35V AC
- **PS42**: 85V ÷ 260V DC or AC

PS32 and **PS42** modules are used to supply the MultiCon.
PS32 module can be supplied with:
19V ÷ 50V DC
16V ÷ 35V AC

PS42 module can be supplied with:
85V ÷ 260V DC or AC

Additionally modules contain:
- service purpose input (service port),
- 24V DC output, used to supply external sensors,
- digital input, used for digital signal measurement,
- RS-485 port, used for communication with other devices using Modbus protocol.

MODULE PIN ASSIGNMENT



Pin description:
1, 2 : power supply connectors - supply voltage depends on version, but polarization is irrelevant,
3 : ground for voltage output,
4 : +24V DC output, used to power external sensors,
5 : digital input - used to measure digital signals,
6 : ground for connectors 5, 7, 8,
7, 8 : data inputs for RS-485

TECHNICAL DATA

	PS32	PS42
Number of inputs/outputs	5	5
Power supply	19V...**24**...50V DC; 16V...**24**...35V AC	85V...**230**...260 AC/DC; 50-60 Hz
USB Service	Service port	Service port

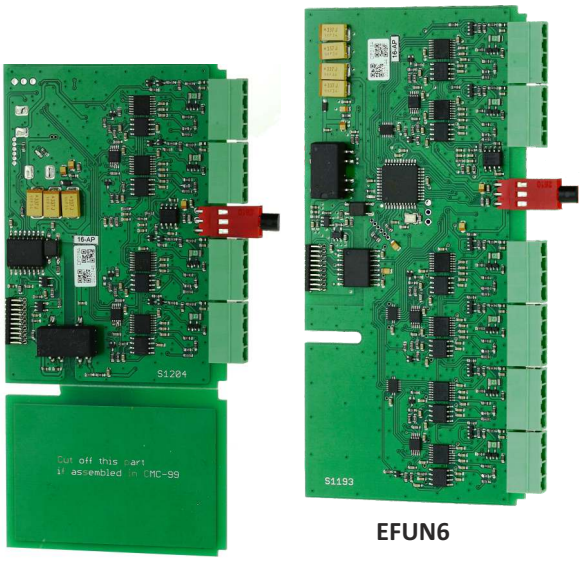
Weight	81 g	91 g
Part number	M99-PS32-001	M99-PS42-001

MultiCon

Input modules - universal with totalizer

- **EFUN4**: 4 unisolated universal inputs
- **EFUN6**: 6 unisolated universal inputs



EFUN4 EFUN6

On customer's request, it is possible to install modules equipped with 4 or 6 universal unisolated inputs (incl. totalizer on 0/4 ÷ 20 mA input). Each module includes a sensor for cold junction compensation. It is most advanced input module, available for the MultiCon. With its help user can make many different kind of measurements in each channel. This module can measure: voltage, current, flow (analog), temperatures (TC or RTD), digital signals (TTL or HTL).

EFUN modules parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field („°C", „mA", „V", „Ohm" or „mV"), depending on **Mode** parameter settings,
- **Mode** - allows to set operation mode, eg. select a type of thermocouple or mV measurement range or other,
- **Low limit** - defines measurement level below which in logical channel „Lo" state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi" state will be displayed,
- **Wire compensation** - menu which allows to compensate measurement errors, which can be caused by wrong sensor readings, options: compensation mode (allows to choose parameter which will be used in compensation process), disable (compensation is not active), manual (allows to compensate sensor constant offset),
- **Actual temperature** - parameter in which user enters actual temperature near the sensor, which is measured by more reliable thermometer.

MultiCon

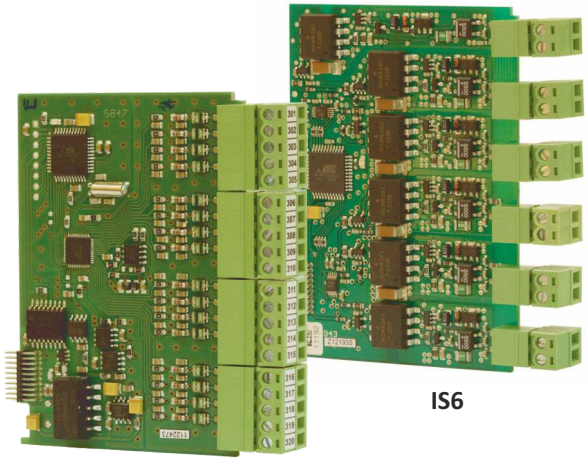
Input modules - current

- **I16**: 16 current inputs
- **I24**: 24 current inputs
- **IS6**: 6 isolated current inputs

MultiCon can be equipped with modules having 16 or 24 non isolated or 6 isolated current inputs. To make sensor connection easier, modules **I16** and **I24** have inputs groupped into fours. **IS6** module has all inputs separated one from another and signal polarity on it's inputs has no matter.

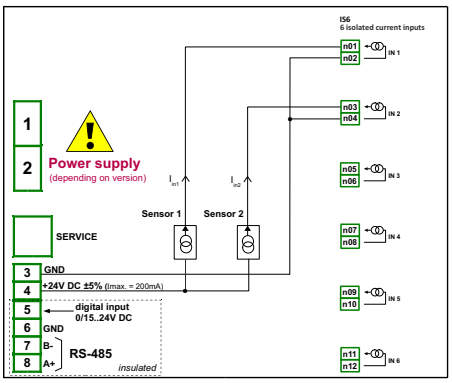


IS6

I16

All GND terminals in the **I16** and **I24** modules are common but separated from power supply and other modules.

Current inputs parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays measurement unit „mA”,
- **Mode** - defines measurement range (0-20 or 4-20),
- **Low limit** - defines measurement low limit, below which the device returns „Lo” value,
- **High limit** - defines measurement high limit, above which the device returns „Hi” value.



Examplary connection for 2 - wire sensors and IS6 module

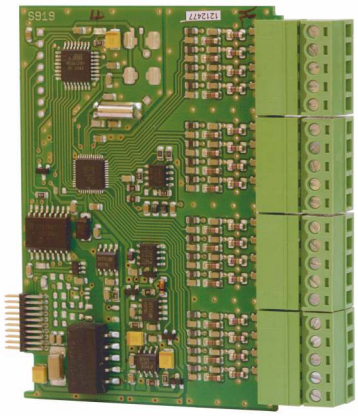
MultiCon

Input modules - voltage

- **U16**: 16 voltage inputs
- **U24**: 24 voltage inputs



U16

On customer's request, the MultiCon device can be equipped with 16 or 24 voltage input modules.
To make sensor connection easier, inputs are grouped and all ground terminals are common but separated from power supply and other modules.

Voltage input parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays measurement unit „V”,
- **Mode** - defines measurement range (0 - 5V, 1 - 5V, 0 - 10V, 2 - 10V),
- **Low limit** - defines measurement level below which in logical channel „Lo” state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi” state will be displayed.

Connections for 3 - wire sensor (voltage)

MultiCon

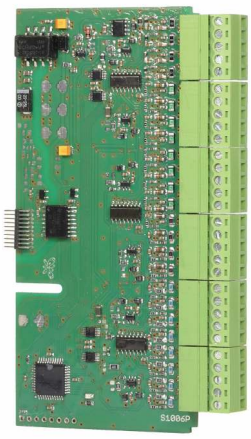
Input modules - voltage/current/NTC



- **UI4N8:** 4 voltage + 4 current + 8 NTC inputs
- **UI8N8:** 8 voltage + 8 current + 8 NTC inputs

The MultiCon **UIN** modules include 16 or 24 voltage / current / NTC inputs, which allows to measure current, voltage, resistance and temperature (using NTC sensors). Inputs are gathered into groups to make connections easier. All ground terminals of a particular module are common, but separated from power supply and other modules. If it is necessary to make measurements with different ground potentials, several UIN modules have to be installed into MultiCon unit.

Voltage / current / NTC (temperature or resistance measurement) inputs parameters are:
- **Name** - read-only input name given by the device („mA", „V", „°C" or „Ω"),
- **Unit** - read-only field which displays unit of measurement,
- **Mode** - defines measurement range,
- **Low limit** - defines measurement level below which in logical channel „Lo" state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi" state will be displayed.

Additionally for temperature mode:
NTC Equation - allows to choose method of entering thermistor characteristic. There are two possibilities: equation with Beta parameter and equation based on Steinhart-Hart coefficients.

When NTC inputs are used, it is recommended to use shielded wires and connect shield to GND connector on the module.

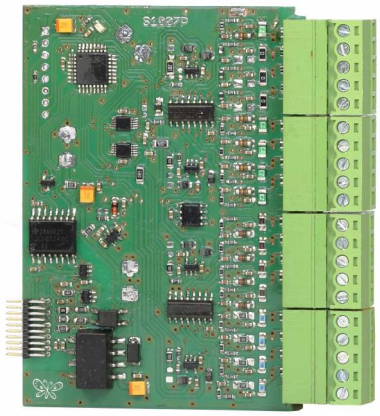
Input modules - voltage/current/digital



- **UI4D8:** 4 voltage + 4 current + 8 digital inputs
- **UI8D8:** 8 voltage + 8 current + 8 digital inputs

The MultiCon **UID** modules include 16 or 24 voltage / current / digital inputs, which allows to measure current and voltage and can be equipped with uninsulated digital inputs. Inputs are gathered into groups to make connections easier. All ground terminals of a particular module are common, but separated from power supply and other modules. If it is necessary to make measurements with different ground potentials, several UID modules have to be installed into MultiCon unit.

Voltage / current inputs parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays unit of measurement („mA", „V"),
- **Mode** - defines measurement range,
- **Low limit** - defines measurement level below which in logical channel „Lo" state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi" state will be displayed.

Digital inputs parameters are:
- **Mode** - defines input voltage ranges (TTL: „0" for 0 ÷ 0,8V; „1" for 2 ÷ 5.5V and HTL: „0" for 0÷4,2V; „1" for 11,5÷30V),
- **Filter time** - defines minimal time that has to elapse from last input state change, if this change wants to be noticed. Each input has the possibility to sets its own Filter time, even if this input is part of another, different set of this parameter do not disturbs their work.

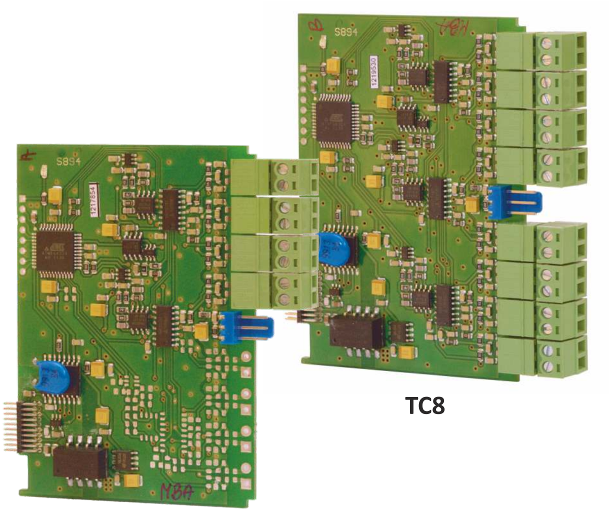
Input modules - thermocouple



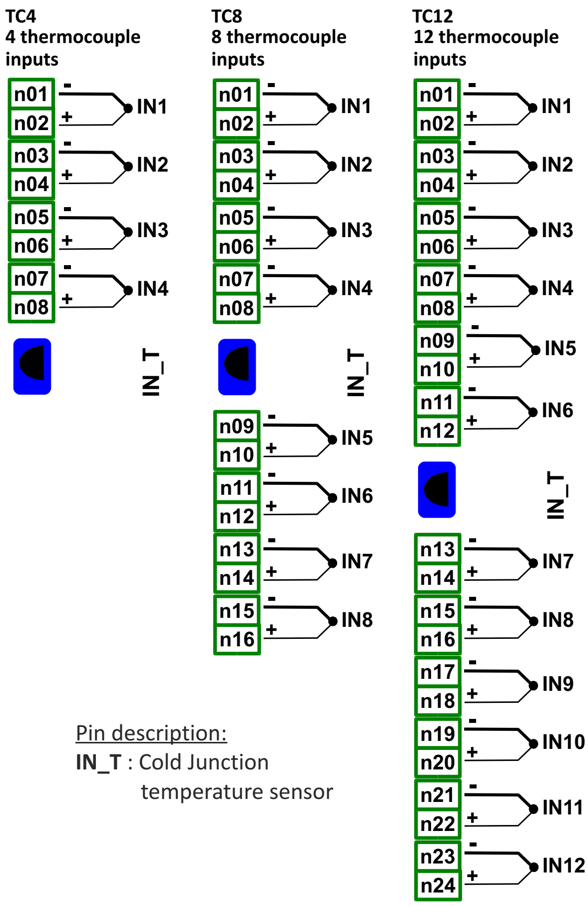
TC8

TC4

- **TC4**: 4 thermocouple inputs
- **TC8**: 8 thermocouple inputs
- **TC12**: 12 thermocouple inputs

The range of **TC** modules consist of 4, 8 and 12 thermocouple input modules, each equipped with 1 input for connectors temperature measurement. Primary destination of these modules is temperature measurement using thermocouple sensors, but it is also possible to measure voltage with typical thermocouple ranges.

MODULE PIN ASSIGNMENT



Pin description:
IN_T : Cold Junction temperature sensor

TC modules parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays „°C” or „mV”, depending on **Mode** parameter settings,
- **Mode** - allows to set type of thermocouple or mV measurement range,
- **Low limit** - defines measurement level below which in logical channel „Lo” state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi” state will be displayed,
- **Wire compensation** - allows to compensate measurement errors, which can be caused by wrong sensor readings,
- **Compensation** - parameter which allows to manually compensate sensor error, written here value is added or subtracted from measured sensor value,
- **Actual temperature** - parameter in which user enters actual temperature near the sensor, which is measured by a more reliable thermometer,
- **Compensate** - button which activates the compensation,
- **Compensation** - read only parameter; displays voltage value calculated to compensate temperature measurement.

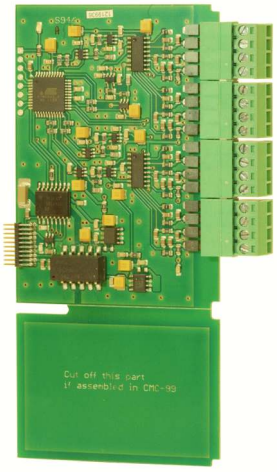
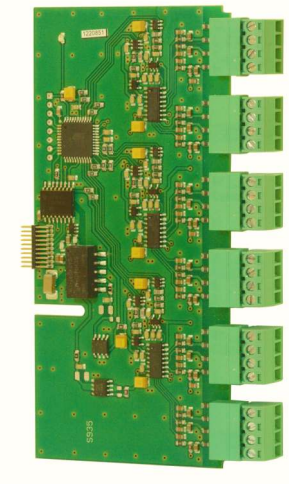
MultiCon

Input modules - RTD

- **RT4**: 4 RTD inputs
- **RT6**: 6 RTD inputs



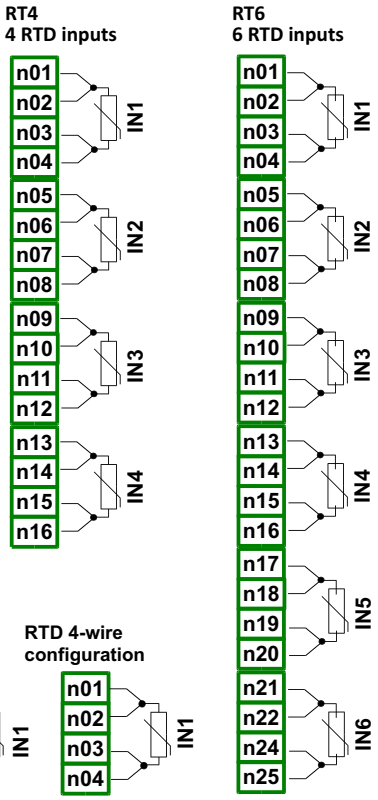
RT4

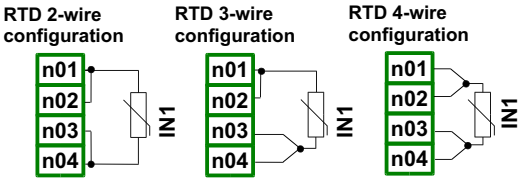


RT6

The range of **RTD** modules consist of 4 and 6 RTD input modules. These inputs are used for temperature measurement using RTD type temperature sensors (by 2-, 3- and 4-wire method), or for resistance measurement in the ranges up to 3kΩ. The RT modules cooperate with many kinds of resistance thermometers and thanks to this, there is no need to change the module when another temperature sensor has been used, the user only needs to change the settings in the MultiCon unit.

MODULE PIN ASSIGNMENT





RT4 and **RT6** modules parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays „°C" when **Mode** parameter is set on temperature measurement, or displays „Ω" when **Mode** parameter is set on resistance measurement,
- **Mode** - defines which sensor is used for measurement, or what is the resistance measurement range and what is the method of these measurements,
- **Low limit** - defines measurement level below which in logical channel „Lo" state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi" state will be displayed.

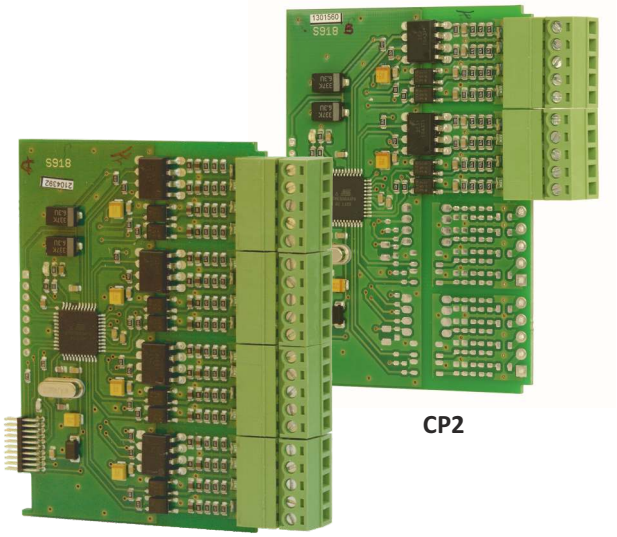
** CMC reads state of inputs every 100 ms*

MultiCon

Input modules - universal counters

- **CP2**: 2 isolated universal counters
- **CP4**: 4 isolated universal counters

The MultiCon can be also equipped with modules having 2 or 4 universal counters. Each counter can be configured independently and has two counting inputs (**Inp[n]1**, **Inp[n]2**), programmable input (**Prog[n]**), reset input (**Res[n]**), where „n" means counter number from 1 to 4.



CP2

CP4

The counter parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays measurement unit: pulses,
- **Low Limit** - value determining amount of pulses, below which in logical channel „Lo" state will be displayed,
- **High Limit** - value determining amount of pulses, above which in logical channel „Hi" state will be displayed,
- **Function mode** - specifies the counting mode: „A + B", „A - B", „quad",
- **Reset now** - button allowing user to manually reset the counter,
- **Reset mode** - it allows to choose an additional resets for the counter, it has the following parameters: from log. channel or external,
- **Reset source** - this parameter is visible when Reset mode is set as from log. channel or both, it contains a list of logical channels and the chosen one will reset the counter when its value is higher than 0,
- **Prog. inp. mode** - specifies counter reaction on higher than 0 value appearance on Prog. input,
- **Filter** - sets filter on counter inputs which allows getting rid of negative effects of signal bounces; it has the following parameters: disable, 10 ÷ 90.

MultiCon

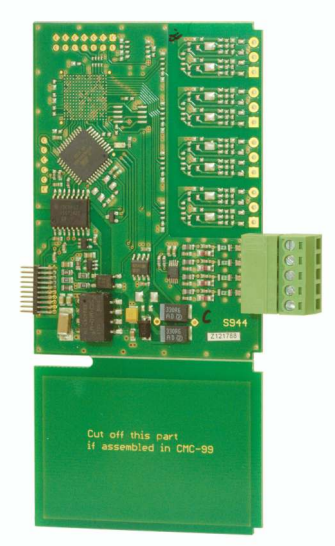
Input modules - analogue flowmeters



FI2

- **FI2**: 2 analogue flowmeters + 2 current inputs
- **FI4**: 4 analogue flowmeters + 4 current inputs

The **FI** modules have been especially designed for the MultiCon units used in flow measurement applications. They allow user to display and record both actual flow (rate) and total flow (volume).
These modules have extra 2 or 4 analogue inputs for general purpose use. Each flow channel is equipped with **IN[n]** input and common ground **GND**. All inputs are galvanically separated from the device, however have common ground. The user can, thanks to Scaling parameter in Logical channel, interpret measured current by the device at its discretion, which allows to cooperate with any kind of analogue output sensors. The general purpose use current inputs have common ground and they are isolated from the supply voltage and other modules.

Analogue flowmeter parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays measurement unit,
- **Base unit** - defines unit which is used by the totalizer (for example when flow measurement unit is m3/s, the base unit is „m3") ,
- **Mode** - defines current range of selected input (0÷20 mA, 4÷20 mA) and the time base which is used during the measurement,
- **Low limit** - value which determines measured current, below which in logical channel „Lo" state will be displayed,
- **High limit** - value which determines measured current, above which in logical channel „Hi" state will be displayed,
- **Balance** - submenu which contains totalizer settings:
  - **Reset now** - manual reset of the totalizer,
  - **Reset mode** - turns on and off reset from logical channel,
  - **Reset source** - allows to choose a logical channel from the list, which will reset the totalizer, when value in this channel will be greater than 0,
  - **Strobe mode** - turns on and off balance calculating from logical channel,
  - **Strobe source** - allows to choose logical channel from the list, which will hold balance calculating in totalizer,
  - **Counting direction** - turns on and off change of the counting direction,
  - **Direction source** - allows to choose a logical channel from the list, which will change the counting direction.

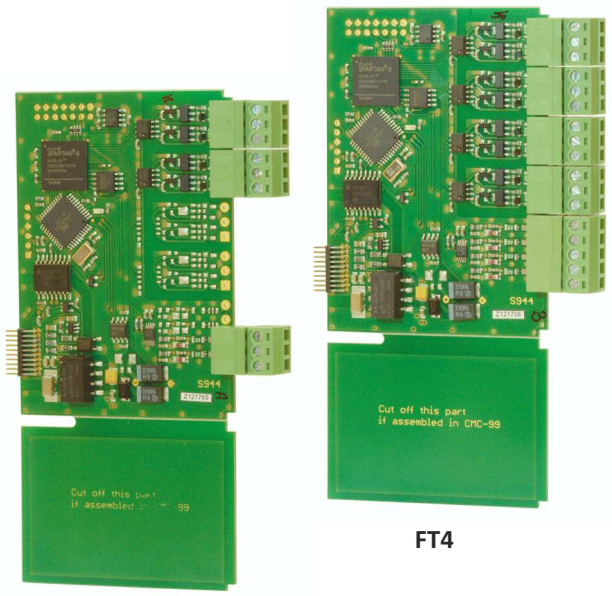
Input modules - pulse flow or ratemeters



FT4

FT2

- **FT2**: 2 isolated pulse flow or ratemeters + 2 current inputs
- **FT4**: 4 isolated pulse flow or ratemeters + 4 current inputs

The **FT** modules have been especially designed for the MultiCon units used in flow or rate measurement applications. They allow user to display and record both actual flow (rate) and total flow (volume). These modules have extra 2 or 4 analogue inputs for general purpose use. Each pulse channel is equipped with counting inputs: **Inp[n]1**, **Inp[n]2** and common ground **COM[n]**. All pulse channels are galvanically separated from the device and from themselves. The general purpose use current inputs have common ground and they are isolated from the supply voltage and other modules.
FT2 and FT4 modules can be used also as high speed **quadrature counters**.

Pulse flow or ratemeters parameters are:
- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays the time base of the measurement,
- **Base unit** - defines unit which is used by the totalizer (for example when flow measurement unit is m3/s, the base unit is „m3") ,
- **Mode** - defines the time base which is used during the measurement (pulses per second, pulses per minute, pulses per hour),
- **Low limit** - value which determines amount of pulses, below which in logical channel „Lo" state will be displayed,
- **High limit** - value which determines amount of pulses, above which in logical channel „Hi" state will be displayed,
- **Counting mode** - defines how the device should interpret signals on pulse inputs, it has the following options: with direction input, quad 1, quad 4,
- **Filter** - defines maximal frequency (with 50% duty cycle) the device will measure, options: disable, 10 Hz, 25 Hz, 50 Hz, 100 Hz, 1 kHz, 5 kHz, 10 kHz, 50 kHz,
- **Zero time** - maximal awaiting time for the next pulse. If this time is exceeded the device will display 0 value; it has the following options: 0.1 sec., 1 sec., 10 sec.,
- **Balance** - submenu which contains totalizer settings: Reset now; Reset mode; Reset source; Strobe mode; Strobe source; Counting direction; Direction source.

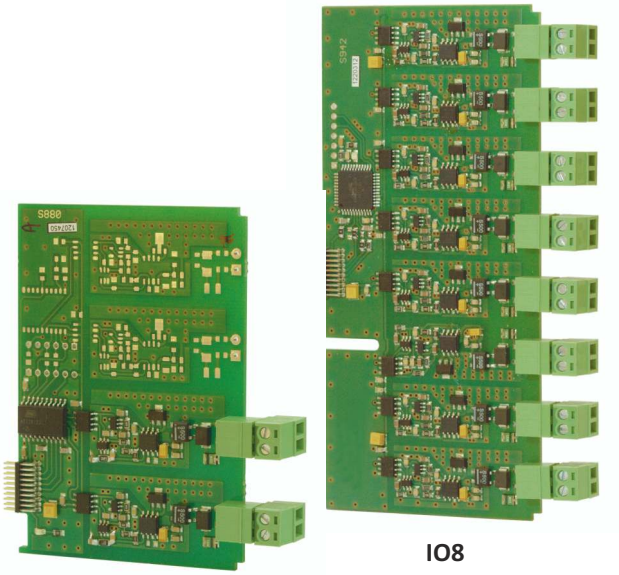
Output modules - current

- **IO2**: 2 current outputs, isolated, passive
- **IO4**: 4 current outputs, isolated, passive
- **IO6**: 6 current outputs, isolated, passive
- **IO8**: 8 current outputs, isolated, passive

Current output modules are used to control other devices based on current in industrial automation applications. These modules are equipped with 2, 4, 6, 8 individually isolated (one from another) passive current outputs.



IO8

IO2

Current outputs parameters are:
- **Name** - read-only output name given by the device,
- **Unit** - current outputs have constant unit, „mA",
- **Source** - contains a logical channels list, where selected one will be data source for current output,
- **Lower** and **Upper level (Input levels parameter block)** - limits input signal range which is downloaded from Source parameter, below this range the input signal will be equal to **Lower level** and above this range the input signal will be equal to **Upper level**,
- **Lower** and **Upper level (Output levels parameter block)** - defines output signal changes range, below this range the output signal will be equal to **Lower level** and above this range output will be equal to **Upper level**. The relationship between input and output levels is linear and limited by defined range,
- **Alarm level** - defines output value which appears when **Source** parameter returns alarm state, but it can not exceeds the hardware limit. Alarm state is when a logical channel which is data source returns Err, Lo or Hi state.

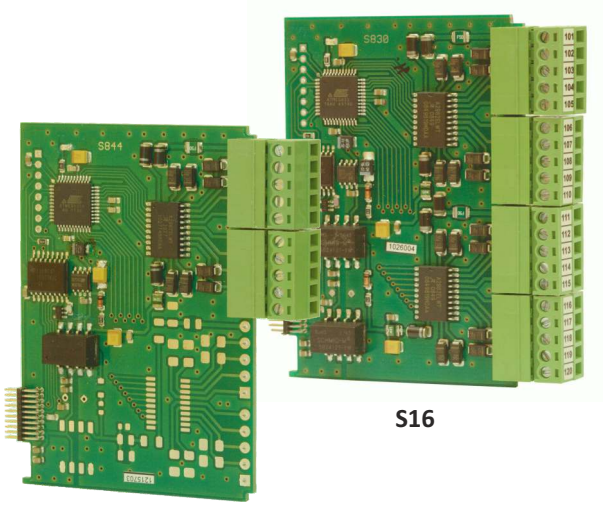
Output modules - SSR



S16

S8

- **S8**: 8 x SSR outputs
- **S16**: 16 x SSR outputs
- **S24**: 24 x SSR outputs

These modules are equipped with 8, 16 or 24 **SSR** outputs. May be used to control executive device state in a simple on/off or PWM mode.

Built-in outputs parameters in the PWM mode are:
- **Name** - read-only output name given by the device,
- **Mode** - this parameter allows the user to select method of the output operation,
- **Source** - it contains the Logical channels list, the chosen one will be data source for the relay,
- **Alarm level** - allows the user to enter value at the output in times of alarm state,
- **Level** - defines the source signal level at which the output switches the state (from low to high state or vice versa from high to low state), occurs for the mode,
- **Lower level and Upper level** - defines constant values on which depends relay state switch (for **Level mode: value**), or allows to choose a logical channels from the list, which actual value will be data for relay state switch (for **Level mode: channel**),
- **Hysteresis** - shifts relay levels with constant value, in the Relay operation mode,
- **On delay** - time which elapses from the moment when source data meets the requirements for relay switch, to actual relay's switch to active state,
- **OFF delay** - time which elapses from the moment when source data meets the requirement for relay switch, to actual relay's switch to passive state,
- **Min.ON time** - minimal time when the relay is in the active state,
- **Min.OFF time** - minimal time when the relay is in the passive state.

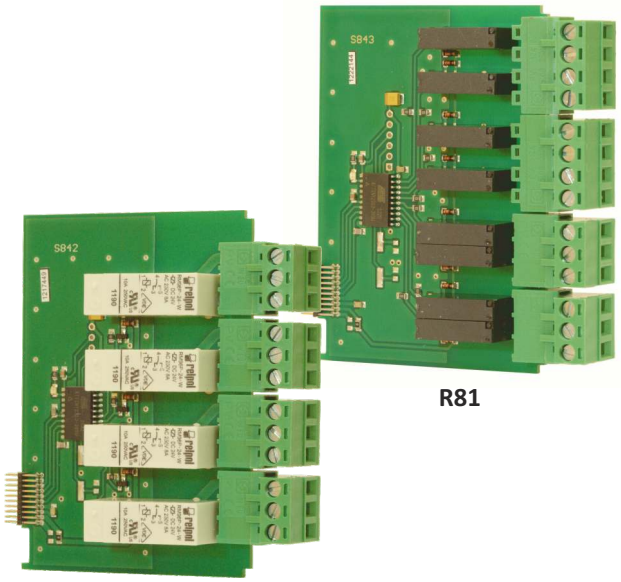
Output modules - relay



R81

R45

- **R45**: 4 x 5A/250V relay outputs
- **R65**: 6 x 5A/250V relay outputs
- **R81**: 8 x 1A/250V relay outputs
- **R121**: 12 x 1A/250V relay outputs

The modules with relay outputs are used to switch on and off executive device circuits in the automatics. These modules are equipped with 4, 6, 8 or 12 relay outputs.

Relay parameters are:
- **Name** - read-only output name given by the device,
- **Mode** - read-only field which allows to choose, how the relay reacts on the source signal (**Source parameter**),
- **Source** - it contains the Logical channels list, the chosen one will be data source for the relay,
- **Alarm state** - allows to choose relay's respond for alarm state. Alarm state is when in logical channel, which is data source for the relay, returns -Err-, -Lo- or -Hi-,
- **Level mode** - allows to choose, where the data is coming from for **Level**, **Lower level** and **Upper level** parameter: value, channel,
- **Level** - defines constant signal level, exceeding which causes relay state switch, or allows to choose a Logical channel, which actual value data is for relay state switch **Level**,
- **Lower level and Upper level** - defines constant values which depends on relay state switch, or allows to choose a logical channels from the list, which actual value data is for relay state switch,
- **Hysteresis** - shifts relay levels with constant value,
- **On delay** - time which elapses from the moment when source data meets the requirements for relay switch,
- **OFF delay** - time which elapses from the moment when source data meets the requirement for relay switch,
- **Min.ON time** - minimal time when the relay is in the active state,
- **Min.OFF time** - minimal time when the relay is in the passive state.

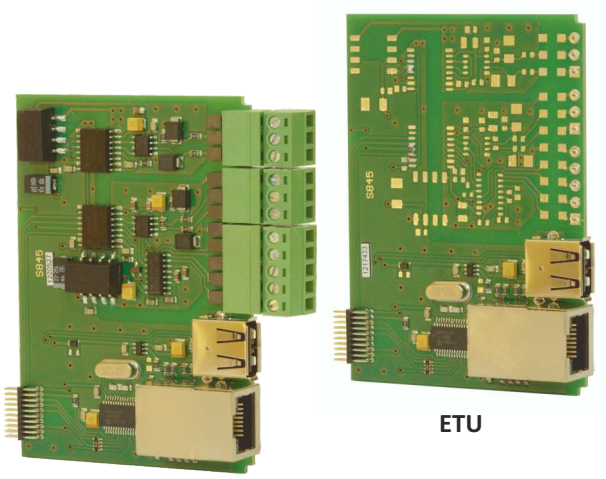
MultiCon

Communication modules

- **ETU**: Ethernet + USB
- **ACM**: advanced communication module
- **USB Host**



ACM

ETU

ETU communication module contains:
- **Ethernet** port, used for connection of the MultiCon with another devices or systems via LAN or WAN,
- **USB** port, used for connection of the external devices such as PC mouse, keyboard or USB flash drive.

Advanced communication module (**ACM**) contains:
- **Ethernet** port, used for connection of the MultiCon with another devices or systems via LAN or WAN,
- **USB** port, used for connection of the external devices such as PC mouse, keyboard or USB flash drive,
- additional **RS-485** port and **RS-232** port shared with third RS-485 port, used for communication with other devices using Modbus RTU protocol.

USB (back - host only)
Port used for connection of the external devices such as PC mouse, keyboard or USB flash drive,
