

TSV200-60i 1-Wire voltage sensor

Short description

TSV200-60i is a voltage sensor with a 1-Wire digital interface and galvanic isolated input. It provides a low-cost option for DC voltage monitoring.

The sensor can be used for power measurements of telecommunication systems (-48VDC standard), solar systems, monitoring and control of batteries, industrial automation etc.

TSV200-60i has two RJ11 connectors, for easy daisy chain arranging of the 1-Wire bus.

LED indicator

The status of the device is shown by single LED, located on the front panel:

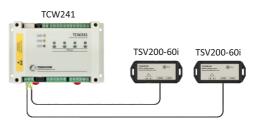

- If the LED blinks on a period of 1 second, the sensor works properly;
- If the LED blinks on a period of 3 seconds, there isn't communication with the controller;
- If LED doesn't blink, there isn't power supply.

Sensor connection

It is strongly recommended to use only UTP/FTP cables. It is strongly recommended to use daisy-chained (linear) topology for multiple sensors and keep total cable length up to 30 meters.

"Star" topology can be used only as a last resort for up to 4 sensors and total cable length up to 10 meters.
